

## Meta 1 (4est 4 the 3s)

**ANSWER:** TIMEFLIES

*Written by: Liam Brown*

If there are leaves on the tree, multiply number of branches by number of roots. If there aren't, add the two numbers. After that, subtract the number of fruit, and multiply the whole thing by which meta answer gave you the number system (ie if Hex, \*1, if Kaktovik, \*4 etc)

The numbers on the trees don't matter, it's the system they're in that does. Many of the numbers should be absurd enough to show teams that.
