

Debugging

ANSWER: KAKTOVIK

Written by: Jocelyn Sides

From the start, you need to delete all the bugs in the puzzle (actual bug names - always plural because 'a number of bugs' and if they don't delete the 's' things go wrong), and from here the code should compile. This gives a list of words, all misspelled. From here, you have to delete the words corresponding to the lines with bugs, leaving only 8 lines. There is a letter missing from each of these words, and those letters spell out KAKTOVIK. The list of words is listed below, with the lines without bugs marked with xxx:
